GRI Index – complete

PORR is committed to the constant evaluation and analysis of its own performance with regard to sustainability criteria. The company uses the Performance Indicators from the Global Reporting Initiative (GRI) in order to prepare the data in a way which is transparent and allows meaningful comparisons. These findings relate first and foremost to the Austrian market. The following index is a supplement to the Sustainable Value Report Index 2012 and gives an overview of all GRI indicators reported (G3.1) including the “Construction & Real Estate Sector

Supplements”. With GRI the quality of data collection is classified into so-called “Application Levels”. As it reports on at least 20 Performance Indicators, the report conforms to **Level B** as defined by the GRI.

At the end of the index you can also find additional key data from PORR which is relevant for GRI. This is indicated in the index with the phrase “see additional key data”.
